

# CONSTRUCTION VEGETATION MANAGEMENT (CVM)

Where Field Execution **Drives** Reliability

Vegetation isn't an afterthought — it's construction-critical. Every outage and re-mobilization tells the same story — vegetation was handled too late. At Clear Path Utility Solutions, we put vegetation where it belongs: **on the critical path.**

## THE CHALLENGE

Utilities lose millions when vegetation is treated as cleanup instead of construction control. Late planning causes:

- Access delays & blocked right-of-ways
- Surprise change orders & cost overruns
- Safety exposures and compliance risk under FAC-003 & OSHA 1910.269

## THE CPUS SOLUTION

Clear Path's **Construction Vegetation Management (CVM)** program integrates proactive vegetation planning and QA/QC oversight into every phase of construction — ensuring reliability, safety, and cost efficiency.

### Our Team Delivers:

- Pre-construction surveys led by experienced Estimating Arborists
- Access & clearance planning aligned to ANSI A300 & FAC-003
- QA/QC verification for safety, restoration, and schedule reliability
- Vegetation tracking dashboards that monitor real-time progress and schedule alignment

### Results:

- No vegetation-driven change orders
- On-schedule project delivery
- Audit-ready documentation
- Utilities that integrate CVM early cut vegetation-related delays by up to 40%

We don't just manage vegetation — **we engineer reliability and reduce risk.**

## READY TO BUILD SMARTER?

Let's talk about how CVM can keep your projects on track and your budgets intact.
